

WHOLE PREY SUPPLEMENT

Supplemental feed for carnivorous animals, to supplement whole prey diets.

Features and Benefits of DK Zoological Whole Prey Supplement

- * Especially designed to supplement whole prey with bones
- * Developed in conjunction with specialised veterinarians and leading nutritionists
- * Meets the requirements of carnivorous animals based on the most recent information from the FEDIAF and NRC guidelines

* The ideal dietary calcium phosphorus ratio for carnivores is 1:1 - 2:1. The Ca:P ratio of three often fed preys are shown in the table on the right. As shown, these preys already have an ideal Ca:P ratio. Therefore calcium and phosphorus levels in this supplement are low.

	Ca (%)	P (%)	Ca : P
Rabbit	1,01	0,63	1,6 : 1
Rat	0,69	0,49	1,4 : 1
Day old chick	0,4	0,26	1,5 : 1

Feeding Guide

The supplement should be added at 1% of wet weight of the diet (e.g. 10 g of supplement added to 1 kg prey).

* 500 g tubs come with a small scoop, that contains +/- 4 g supplement. Use 2,5 level small scoops to supplement 1 kg of prey.

* 4 kg buckets come with a large scoop, that contains +/- 20 g supplement. Use 2,5 level large scoops to supplement 5 kg of prey.

The supplement comes as a powder that can be easily added to the diet. To prevent losses add the supplement in the stomach area or make a cut in the armpit or inguinal area of the prey to add the supplement.

Available in: 500 g, 4 kg, 15 kg

Calculated Analysis and additives

The analysis of the pure supplement are shown in the left column. In the right column the added nutrients to the end product are shown when 1% is added to a prey.

	Supplement	End product		Supplement	End product		Supplement	End product			
Moisture	%	4,9	0,05	Manganese	ppm	500	5,0	Vitamins
